

FDA HEALTH WARNING!

THE FACTS YOU SHOULD KNOW ABOUT FLU ANTI VIRALS/VACCINES

The Japanese Ministry of Health has already explicitly warned people between 10 and 19 years not to take Tamiflu.

FDA Recommends New Severe Warnings for Anti-Flu Drugs Tamiflu, Relenza

Numerous reports from Japan and other countries are showing that Tamiflu and Relenza can cause devastating, tragic side effects, such as:

1. Hallucinations
2. Delusional behaviour
3. Loss of contact with reality
4. Convulsions
5. Nausea and vomiting
6. Psychosis
7. Suicidal behaviour
8. Death of both adults & children

The FDA staff recommended that Tamiflu's label be changed to note that "in some cases, these behaviours resulted in serious injuries, including death, in adult and pediatric patients." The FDA staff also recommended Relenza's label be changed to state that "reports of hallucinations, delirium and abnormal behaviour" have been observed in some patients taking the drug.

Children Are At An Increased Risk

Children in particular are considered at the highest risk when taking these drugs. **Five deaths** linked to **Tamiflu** occurred among children falling from balconies or suddenly running into traffic.

FDA [Food and Drug Administration] experts studied nearly 600 cases, mostly in Japan, and found three Japanese adults committed suicide and 22 more youths under 21 died after taking Tamiflu. Similarly, the FDA studied 115 reports of abnormal psychiatric behaviour among people taking Relenza, including 74 children.

REVERSE SIDE OF LEAFLET

The Swine Flu Propaganda Explained

All the fear mongering nonsense about Avian Flu/Bird flu - and now swine flu - over the past few years was to condition the population that something big was bound to break out sooner or later. Then, when they decided the time was right - like in Mexico City - they ramped up the media / government / experts to put us in a state of fear - saying that this was the start of a pandemic. But just like 1918, only a few died at first [these deaths are just normal occurrences]. However, they are still saying this could explode when winter comes. Therefore, governments will now suggest or enforce that the population are vaccinated - before winter comes - hence the large stockpiles of vaccines already in place. Then just like with AIDS and with the killer smallpox vaccine, you'll see people dieing more and more as winter approaches - not because of some swine virus but because of the lethal cocktail of poisons in the vaccine! This is a repeat of the 1918 Spanish flu vaccine massacre! (See below)

CHAPTER 2 THE SPANISH INFLUENZA EPIDEMIC OF 1918 WAS CAUSED BY VACCINATIONS

"I WAS AN ON-THE-SPOT OBSERVER OF THE 1918 INFLUENZA EPIDEMIC"

All the doctors and people who were living at the time of the 1918 Spanish Influenza epidemic say it was the most terrible disease the world has ever had. Strong men, hale and hearty, one day would be dead the next. The disease had the characteristics of the black death added to typhoid, diphtheria, pneumonia, smallpox, paralysis and all the diseases the people had been vaccinated with immediately following World War 1. Practically the entire population had been injected "seeded" with a dozen or more diseases — or toxic serums. When all those doctor-made diseases started breaking out all at once it was tragic.

That pandemic dragged on for two years, kept alive with the addition of more poison drugs administered by the doctors who tried to suppress the symptoms. As far as I could find out, the flu hit only the vaccinated. Those who had refused the shots escaped the flu. My family had refused all the vaccinations so we remained well all the time. We knew from the health teachings of Graham, Trail, Tilden and others, that people cannot contaminate the body with poisons without causing disease.

A recent article in my local paper discussed stock piling of medical gowns and masks for an expected flu outbreak that could kill 1 in 80 people:

DID THEY KNOW A SWINE FLU SCARE WAS ABOUT TO BREAK OUT?

From:

<http://www.thisisderbyshire.co.uk/news/flu-pandemic-kill-80/article-874746-detail/article.html>

Flu pandemic 'could kill up to one in 80'

Monday, April 06, 2009, 07:30

Medical gowns and masks have been stockpiled and plans are in place to give information and drugs to the public to stop the spread of the killer disease. Experts fear a 15-week pandemic could kill 12,000 people in the county.
